

2017-2018 Proposed Special Education Funding

The Governor's Budget for 2017-2018 includes \$1,121,815,000 for the Special Education appropriation. This amount is a \$25,000,000 increase (2.3 percent) over the appropriation for 2016-2017.

For the Special Education Funding component, increases in the component after the 2013-2014 fiscal year will be distributed based on three categories of support for students with disabilities.

For fiscal year 2017-2018, a school district will receive an allocation as follows:

1. An amount equal to its 2013-2014 Special Education Funding allocation (approximately \$947,536,000).
 2. A prorata share of \$88,825,000, based on the school district's adjusted weighted special education student count multiplied by its market value/personal income aid ratio and its equalized mills multiplier.
- Adjusted special education student count equals the sum of:
 - a. The sum of the weighted-student counts for categories 1, 2 and 3 calculated by multiplying the number of students in each student category by its weighting --- 1.51, 3.77, and 7.46, respectively, and
 - b. The sparsity/size adjustment for qualifying school districts.
 - Sparsity/size adjustment is calculated as follows:
 - a. If the school district's sparsity/size ratio is greater than the 70th percentile sparsity/size ratio, divide the school district's ratio by the 70th percentile ratio; subtract 1; multiply by 0.5; multiply by the weighted-student count.
 - b. If the school district's sparsity/size ratio is less than or equal to the 70th percentile sparsity/size ratio, the sparsity/size adjustment is 0.
 - Sparsity/size ratio is calculated as follows:
 - a. Calculate the sparsity ratio: divide the school district's average daily membership per square mile by the state total average daily membership per square mile; multiply by 0.5; subtract from 1.
 - b. Calculate the size ratio: divide the school district's average daily membership by the average of the average daily membership for all school districts; multiply by 0.5; subtract from 1.
 - c. Calculate the combined sparsity/size ratio by weighting the sparsity ratio at 40 percent and the size ratio at 60 percent.
 - Equalized mills multiplier is calculated as follows:
 - a. Calculate the average of the most recent three years of equalized mills.
 - b. If the school district's 3-year average equalized mills is greater than the 70th percentile equalized mills, its equalized mills multiplier equals 1.
 - c. If the school district's 3-year average equalized mills is less than or equal to the 70th percentile equalized mills, divide the school district's equalized mills by the 70th percentile equalized mills.
